

Converted the training data into jsonl file through vscode with trainingDataConverter

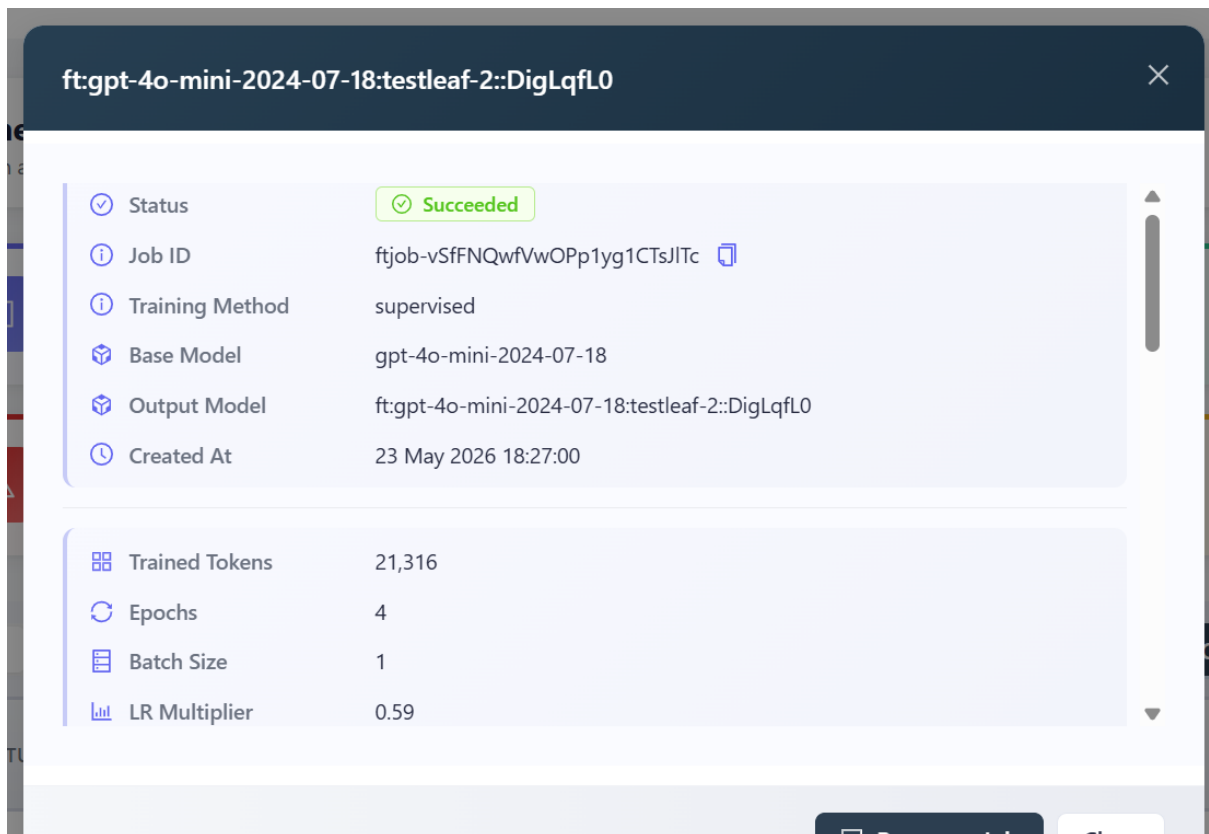

The screenshot shows the VS Code editor with the `TrainingDataConverter.java` file open. The file is located in the `src > main > java > com > framework > converter` directory. The code defines a `TrainingDataConverter` class with a `createJsonLine` method that processes HTML content into JSON lines. The terminal output shows the command executed and the resulting JSONL file saved to `D:\training\training\training_data_chat.jsonl`.

```
src > main > java > com > framework > converter > TrainingDataConverter.java > TrainingDataConv
15 public class TrainingDataConverter {
43     public static JSONObject createJsonLine(String html, String j
53         messages.put(new JSONObject().put("role", "system").put("
54         messages.put(new JSONObject().put("role", "user").put("co
55         messages.put(new JSONObject().put("role", "assistant").pu
56
57         jsonObj.put("messages", messages);
58
59         return jsonObj;
60     }
```

```

```

Did the fine tuning with api.testleaf.com

The screenshot shows the training job details for `ft:gpt-4o-mini-2024-07-18:testleaf-2::DigLqfL0`. The job status is **Succeeded**. The training method is `supervised`, the base model is `gpt-4o-mini-2024-07-18`, and the output model is `ft:gpt-4o-mini-2024-07-18:testleaf-2::DigLqfL0`. The job was created on May 23, 2026, at 18:27:00. The training parameters are as follows:

Parameter	Value
Trained Tokens	21,316
Epochs	4
Batch Size	1
LR Multiplier	0.59
